

A single email can lead to a multi-million dollar breach in seconds, and the employee responsible may not even be aware of their mistake. The problem lies in the fact that many end users aren't aware of the dangers accompanying today's most common cybersecurity threats, much less how to detect them. CyberSAFE helps ensure that your end users can identify the common risks associated with using conventional end-user technology, as well as how to safely protect themselves and their organizations from security risks.

Designed for business professionals who want to learn the business advantages and technical challenges of planning and implementing Internet of Things devices and related systems. IoT BIZ will jump-start your ability to decipher IoT and understand the components of IoT infrastructure, challenges for consideration, and the impact that IoT will have on your organization. This micro-credential is intended for business leads in project management, marketing, and sales who are seeking to grow their organization through technology solutions.

**COMING SOON:** Artificial Intelligence BIZ (AIBIZ)

In today's digital world, companies and end users alike are using applications to access and interact with their data on a daily basis. To keep up with the demand for constant connectivity, organizations are purchasing and developing applications at an impressive rate – but they are not always designed to defend against the ever-evolving threat landscape. Cyber Secure Coder is designed to validate the knowledge and skills required to design and develop protected applications, regardless of the language used for development or the platform on which they will be deployed.

As IoT evolves into larger-scale business applications in the world of healthcare, manufacturing, and nearly every other industry imaginable, the need for a general understanding of the technologies, tools, and methods that are part of IoT is greater than ever. CIoTP is a comprehensive certification designed to validate that individuals in a wide variety of job functions have a foundational knowledge of the important concepts and components that are part of an IoT ecosystem. *CIoTP has been developed in compliance with ANSI/ISO/IEC 17024 standards, and accreditation is pending approval.*

**COMING SOON:** Certified Artificial Intelligence Practitioner (CAIP)

Cybersecurity professionals require a well-rounded understanding of the tools, processes, and strategies that can be employed to defend their information systems from constantly evolving threats. CyberSec First Responder® (CFR) is a comprehensive certification designed to validate the knowledge and skills required to protect these critical information systems before, during, and after an incident. *CFR is compliant with ANSI/ISO/IEC 17024 standards and is approved by the U.S. Department of Defense (DoD) to fulfill Directive 8570/8140 requirements.*

According to the AT&T State of IoT Survey, 90% of businesses lack the full confidence that their IoT devices are secure. IoT creates exponential vulnerabilities which IT security teams are not currently prepared to defend. CertNexus' Certified IoT Security Practitioner (CIoTSP) upsills your team by validating the knowledge, skills, and abilities to secure network environments for IoT devices, analyze vulnerabilities and determine reasonable controls against threats, and effectively monitor IoT devices and respond to incidents.

**COMING SOON:** Certified Artificial Intelligence Security Practitioner (CAISP)
